

Defoamers: FB 100

Defoamer for Solvent-Based Applications

FB 100 is a silicone modified hydrocarbon blend that provides rapid defoaming in solvent systems.

Benefits: FB 100 improves flow and leveling without causing film defects such as craters, crawling and fish eyes.

Note: In moisture cured systems, FB 100 should be added immediately before application to avoid reaction in the container.

Applications:

- Oil & Alkyd Modified Polyurethanes
- Alkyd Wood Stains
- Nitrocellulose Lacquers
- Epoxies
- Chlorinated Rubber
- Moisture-Cured Polyurethanes

Recommended Usage Levels: Use 0.5 to 1.0% based upon total formula weight. **FB 100** can be added at any time during the manufacturing process or in the finished coating prior to application.

Typical Properties:

Weight per Gallon (lbs)	7.07
Specific Gravity	0.85
Flash Pont F/C	104/37
